Nikhil Kajota

AI Engineer

Bengaluru, Karnataka, India

+91 9413750125 | nikhil941kajota@gmail.com | linkedin.com/in/nikhilkajota | github.com/Nikhilkajota03

Skills Summary

AI & GenAI Architectures: Multi-Agent Orchestration, Supervisor-Worker Pattern, ReAct, GraphRAG, Corrective RAG (CRAG), FastMCP, Reciprocal Rank Fusion (RRF), Hybrid Search

LLM Frameworks & APIs: LangChain, LangGraph, LlamaIndex, OpenAI API, Anthropic Claude API, Groq, Ollama, Hugging Face

Observability, Evals & Security: LangSmith, Langfuse, Arize Phoenix, LLM-as-a-Judge, Context Precision & Recall, Faithfulness, Guardrails, FastMCP Sandboxing, AST Validation

Vector DBs & Search: pgvector, ChromaDB, Pinecone, Qdrant, Neo4j, BM25, Dense & Sparse Retrieval, Cross-Encoder Reranking

Languages & Frameworks: Python (NumPy, Pandas), TypeScript, JavaScript, C++, FastAPI, NestJS, Node.js, Express.js, React.js, Next.js

Databases & Cloud: PostgreSQL, Supabase, Redis, DynamoDB, AWS (EC2, Lambda, SageMaker), GCP (Cloud Run, Secret Manager), Docker, CI/CD (GitHub Actions), Prisma, SQLAlchemy

Work Experience

AI Engineer — Remote, India

DataBlock Technologies — *Jan 2025 – Aug 2026*

- Engineered "FinIntel Copilot", an in-house document intelligence platform for a US-based hedge fund, combining hybrid retrieval ('pgvector', BM25) and GraphRAG to process complex PDFs and PPTs, improving retrieval precision by 35% and reducing LLM hallucinations by 25%.
- Architected a secure Text-to-SQL engine backed by a custom FastMCP sandbox layer, utilizing 'sqlglot' AST validation and transactional rollbacks to ensure zero database mutations while cutting client data-retrieval time by 60%.
- Built multi-step agentic workflows and conversational dashboard chatbots using LangGraph with self-reflective CRAG loops, increasing automated task completion rates by 35% while maintaining strict in-house data security.

AI Engineer — Noida, India

Content Creation — *July 2023 – Dec 2024*

- Developed and deployed a real-time AI voice agent integrating STT, LLM reasoning, and TTS pipelines, achieving sub-400ms latency for seamless, natural user interactions.
- Architected backend APIs, tool-calling pipelines, and multi-turn conversation memory, connecting the voice agent with external services and increasing automated task completion rates by 35%.
- Implemented a Redis-based distributed caching layer for active sessions and frequent requests, reducing database load by 45% and accelerating overall API response times by 50%.

Projects

Autonomous Data Cleaning & Governance Agent | *LangGraph, FastMCP, sqlglot, LangSmith*

- Architected a cyclical multi-agent system using LangGraph (Planner, Guardrail, Worker, LLM Judge) with state persistence, human-in-the-loop approval gates, and automated quality evaluation scoring (> 0.85).
- Engineered an air-gapped FastMCP sandbox with sqlglot AST parsing to block destructive SQL (DROP, TRUNCATE), capturing pre-image row snapshots for atomic rollbacks and LangSmith telemetry.

Education

The LNM Institute of Information Technology — Jaipur, India

Bachelor of Technology — *Aug 2020 – May 2024*
